SUMMARY

Product designer, most recently Senior Product Designer at Glimmora International, designing enterprise SaaS across governance, risk and compliance, government tax administration, SAP lifecycle operations, hospitality PMS and ERP. I work in the domains most designers avoid: multi-role permission models, approval chains, audit trails, evidence handling and regulatory edge cases.

Most of my work runs from product strategy through design, including the component libraries, design systems and tokens I built for four of these products. Three I took all the way from design to working prototype, and two I shipped directly as frontends in Next.js and Tailwind using Claude Code, agents and MCP. Building means I hand engineering teams coded prototypes and implementation-ready specs rather than static files, and I understand what my designs cost to build.

EXPERIENCE

Senior Product Designer — Glimmora International

Doha, Qatar · Remote · October 2024 – July 2026

- Led the product-design migration of a live enterprise GRC application from Mendix to Next.js. Audited every workflow, restructured the experience around role-based tasks rather than legacy screen structure, and sequenced the redesign so business operations never broke during cutover.
- Owned research-led design end to end across six enterprise platforms spanning GRC, compliance, SAP lifecycle, tax administration, relocation and digital twins, setting scope, roles, information architecture, workflows and edge cases from the SOW and business rules before any screen exists.
- Established the design foundations these products are built on: component libraries, design systems and tokens for four platforms, so teams shipped consistently without relitigating patterns.
- Set the standard for how ambiguous enterprise problems were resolved, simplifying workflows built on approvals, evidence, risk scoring, audit trails and administrative control, the areas where enterprise products usually fail on clarity.
- Defined role-based dashboards, interactive prototypes and implementation-ready specifications covering permissions, error states and approval logic, so engineering built against a decision record rather than an interpretation.
- Introduced an AI-assisted design workflow using Claude Code, agents, subagents and MCP integrations for research synthesis, documentation and coded prototyping, removing ambiguity at design-to-engineering handoff.
- Advised product leaders, engineers and business stakeholders through feasibility review, handoff and implementation QA, holding the line on scope and quality through delivery.

UI/UX Designer — BIS Technology

United Arab Emirates · Remote · April 2024 – October 2024

- Designed enterprise ERP interfaces for data-heavy operational workflows, prioritising scanability and task efficiency over visual novelty.
- Ran competitive analysis to identify usability gaps and established the consistent patterns modules were rebuilt against.
- Converted business requirements into user flows, wireframes and implementation-ready high-fidelity interfaces.

UI/UX Designer — Digimeta

Bangalore, Karnataka · On-site · January 2023 – April 2024

- Led end-to-end design for two launched consumer products, Pocket and Flaimed, owning the direction from ideation through post-launch refinement.
- Pocket: a donation experience built around trust signals, where the core problem was reducing drop-off at the point of payment.
- Flaimed: a dating product where safety and meaningful discovery drove the interaction model rather than engagement metrics.

SELECTED WORK

Tax Administration Platform — Confidential government product

Corporate and withholding tax. Designed taxpayer services and officer workflows covering registration, filing, assessment, payments, refunds, objections and evidence. Translated statutory requirements into role maps, workflows and status-driven screens with error prevention and traceability built in.

Glimmora Aether — SAP lifecycle intelligence

Multi-role platform for requesting, approving, executing and governing SAP infrastructure operations. Mapped six roles across requests, blueprints, approval chains, execution jobs, evidence and landscape administration.

Glimmora Relocate — Global relocation, AI-guided planning

Guided experience for planning international relocation across job discovery, country comparison, documentation, finances and family support, sequencing multi-step decisions without overwhelming the user.

Hotel PMS and ERP Booking System — Hospitality operations

Researched hotel operational workflows and designed responsive booking journeys, reservation dashboards, status patterns and management screens, validated through coded prototypes before build.

DESIGN SYSTEMS AND CODE

Built component libraries, design systems and design tokens from scratch for four products, defining the patterns before the screens.

Three products taken from design through working prototype; two designed and shipped directly as working frontends using Claude Code, agents, subagents and MCP integrations. Repositories and live builds available on request. Working in code means my specs account for real implementation constraints.

SKILLS

Strategy and Discovery: Product discovery, domain research, SOW and requirement analysis, problem framing, prioritisation, product documentation.

UX Architecture: Personas, role mapping, information architecture, user journeys, task flows, edge cases, error states, process simplification.

Interaction and Interface: Wireframing, interaction and visual design, enterprise dashboards, tables and forms, prototyping, design systems, UX writing.

Validation and Delivery: Usability testing, heuristic evaluation, stakeholder presentation, developer handoff, design QA, implementation review.

AI-Assisted Workflow: Claude Code, agents, subagents, Model Context Protocol, structured prompting, context engineering, AI-assisted research and coded prototyping.

Tools and Technical: Figma, FigJam, Adobe XD, Illustrator, After Effects, Miro, HTML, CSS, Tailwind, Next.js, API-aware design, RBAC and multi-tenant concepts.

EDUCATION

B.Sc. Design and Visual Communications

Dr. G.R. Damodaran College of Science, Coimbatore · 2019 – 2022

User Experience Designer Program

Designerrs UI/UX Academy, Bangalore · 2022
