SUMMARY

Senior Product Designer at Glimmora International, with 3+ years designing enterprise SaaS across governance, risk and compliance, government tax administration, SAP lifecycle operations, hospitality PMS and ERP. I work in the domains most designers avoid: multi-role permission models, approval chains, audit trails, evidence handling and regulatory edge cases.

I also build. Six personal products shipped as working frontends in Next.js and Tailwind using Claude Code, agents and MCP — which means I hand engineering teams coded prototypes and implementation-ready specs rather than static files, and I understand what my designs cost to build.

EXPERIENCE

Senior Product Designer · Glimmora International *Doha, Qatar · Remote · Oct 2024 – Present*

- **Led the product-design migration** of a live enterprise GRC application from Mendix to Next.js — audited every existing workflow, restructured the experience around role-based tasks rather than legacy screen structure, and sequenced the redesign so business operations never broke during cutover. The hardest constraint was continuity: users could not be retrained mid-migration.
- Own research-led design end to end across GRC, compliance, SAP lifecycle, tax administration, relocation and digital-twin platforms — analysing SOWs, business rules and stakeholder inputs before defining scope, roles, information architecture, workflows and edge cases.
- Simplify workflows built on approvals, evidence, risk scoring, audit trails, execution status and administrative control — the areas where enterprise products usually fail on clarity.
- Design role-based dashboards, interactive prototypes, reusable component systems and implementation-ready specifications covering permissions, error states and approval logic.
- Use Claude Code, agents, subagents and MCP integrations for research synthesis, documentation and coded prototyping, reducing ambiguity between design and engineering handoff.
- Partner with product leaders, engineers and business stakeholders on feasibility review, handoff and implementation QA.

UI/UX Designer · BIS Technology *United Arab Emirates · Remote · Apr 2024 – Oct 2024*

- Designed enterprise ERP interfaces for data-heavy operational workflows, prioritising scanability and task efficiency over visual novelty.
- Ran competitive analysis to identify usability gaps and establish consistent patterns across modules.
- Converted business requirements into user flows, wireframes and implementation-ready high-fidelity interfaces.

UI/UX Designer · Digimeta *Bangalore, Karnataka · On-site · Jan 2023 – Apr 2024*

- Led end-to-end design for two launched consumer products — Pocket and Flamed — from ideation through post-launch refinement.
- Pocket: a donation experience designed around trust signals and a frictionless giving journey, where the core problem was reducing drop-off at the point of payment.
- Flamed: a dating product where safety and meaningful discovery drove the interaction model rather than engagement metrics.

SELECTED WORK

Enterprise GRC Platform Migration — Mendix → Next.js · Glimmora

Restructured a live governance, risk and compliance application without disrupting operations. Rebuilt navigation and information architecture around auditor, risk officer, compliance and executive roles; documented approval logic, permissions and audit-trail behaviour so engineering could rebuild against a specification rather than screenshots.

Bahrain Tax Administration Platform — Confidential government product · Corporate & withholding tax

Designed taxpayer-facing services and internal officer workflows covering registration, filing, assessment, payments, refunds, objections, evidence and compliance review. Translated dense statutory requirements into role maps, workflow diagrams,

forms and status-driven screens with error prevention and traceability built in — in a context where a wrong submission has legal consequences.

Glimmora Aether — SAP lifecycle intelligence · Approvals, execution, governance

Multi-role platform for requesting, approving, executing and governing SAP infrastructure operations. Mapped six distinct roles — requesters, SAP Basis engineers, cloud-infrastructure teams, approvers, auditors and administrators — across requests, blueprints, approval chains, execution jobs, evidence and landscape administration, documenting edge cases and audit behaviour alongside the interface.

Glimmora Relocate — Global relocation · AI-guided planning

Guided experience helping individuals and families plan international relocation across job discovery, country comparison, documentation, finances and family support. Designed AI-assisted guidance patterns that sequence multi-step decisions without overwhelming the user.

Hotel PMS & ERP Booking System — Hospitality operations

Researched hotel operational workflows and designed responsive booking journeys, reservation dashboards, status patterns and management screens. Validated interaction behaviour through coded prototypes before engineering build.

BUILT WITH CODE

Six personal products designed and shipped as working frontends using Claude Code, agents, subagents and MCP integrations — full repositories and live builds available on request. Working in code means my specs account for real implementation constraints, and design-to-development handoff needs fewer clarification cycles.

SKILLS

Strategy & Discovery Product discovery, domain research, SOW and requirement analysis, competitive analysis, problem framing, prioritisation, product documentation.

UX Architecture Personas, role mapping, information architecture, user journeys, task flows, workflow mapping, edge cases, error states, complex process simplification.

Interaction & Interface Wireframing, interaction and visual design, responsive design, enterprise dashboards, tables and forms, prototyping, design systems, UX writing.

Validation & Delivery Usability testing, heuristic evaluation, stakeholder presentation, developer handoff, design QA, implementation review.

AI-Assisted Workflow Claude Code, agents, subagents, Model Context Protocol, structured prompting, context engineering, AI-assisted research and coded prototyping.

Tools & Technical Figma, FigJam, Adobe XD, Photoshop, Illustrator, After Effects, Miro, HTML, CSS, Tailwind, Next.js, GitHub workflows, API-aware design, RBAC and multi-tenant concepts.

EDUCATION

B.Sc. Design and Visual Communications · Dr. G.R. Damodaran College of Science, Coimbatore · 2019 – 2022

User Experience Designer Program · Designerrs UI/UX Academy, Bangalore · 2022
